Hi folks,

In case there is time in the agenda, John Cazes and I wanted to run the following draft note to S2I2 PIs past the SMT for comments. I believe we had a previous discussion of CSAs on the SMT in preparation for a talk at the S2I2 PI meeting this past February. This has also previously been a topic on SPF calls and I believe on Victor's more operational calls with the SPs.

Nancy

XSEDE Community Software Areas

XSEDE would like to announce to all S2I2 principal investigators the availability of developer allocations and community software areas on XSEDE-allocated resources.

All S2I2 PIs may request developer allocations in order to install and maintain software that will be made available to the user community on XSEDE-allocated resources. Community Software Areas (CSAs) are backed up in case of a file system failure and are made available in locations that provide access for all users. Through the use of modules, this installed software will be visible to the user community via the XSEDE software catalog at <http://www.xsede.org/software>. The catalog will also indicate that the software is supported by the developer and can include links to documentation.

XSEDE can advertise training events on installed software and in the future expects to be able to provide usage information to software developers.

If you would like to install your software, see <http://www.xsede.org/software> for instructions and more information. You may also contact us directly with any questions.

Nancy Wilkins-Diehr, ECSS Communities director
John Cazes, ECSS Community Codes manager
