

## **Abstract: Workforce Development: Education**

Champions may wish to propose a project to help create a formal undergraduate or graduate minor, concentration, or certificate program at their institution. Such a project would involve working with the faculty to identify the courses that would be part of such a program, locate and test computational projects that would become parts of those courses, and work with the appropriate academic committees to prepare the materials needed to obtain program approval. Assistance in such projects is available through the XSEDE education program and includes access to example programs, course syllabi, and computational science education materials as well as guidance from the education staff.
