

Abstract: Cyberinfrastructure Resource Integration

The XSEDE Cyberinfrastructure Integration (XCI) team seeks Campus Champions Fellowship applications for projects in bridging activities between a local campus or campuses and XSEDE resources. These can include creating workflow submission systems that send jobs to XSEDE Service Provider resources from campus, the creation of shared virtual compute facilities that allow jobs to be executed on multiple resources, data management for researchers with Globus Connect, the creation of local XSEDE Compatible Cluster Systems, or other projects that utilize tools which reduce barriers for scaling analyses from campuses to national cyberinfrastructure.
