2021-02-02 Meeting notes (Ops)

Date

02 Feb 2021

Attendees

- Scott Wells
- Gregory Peterson
- Carman Hendricks
- Gary Rogers
- Tabitha Samuel
- David Wheeler
- Alexander Withers

Agenda

- New risks for transition based on recent solicitations
  Scott mentioned at the last SMT call John mentioned about the NSF solicitation and there are risks since CEE and XXX are not in the new solicitation and there will be risks associated with that. John asked that all think about this and bring up any issues.
- IPR14 due
  Scott made the google doc and sent a link around

    - Quarterly risk review
      All have already done the risk review
    - Quarterly highlights and metrics data
      Update your info in the google docs
    - Quarterly publications submissions
      Communicate to all funded staff to add any publications in the portal. Use common sense, says Scott

- Liferay update
  Greg emailed Kelly and copied Maytal last week. Maytal replied and encourage to communicate on what is going on. If after a month no further effort on this Greg will continue the discussion. Circle back on this in March, but before the quarterly.
- Mgr Coordination
- Victor mentioned at the SMT that the Hybrid Cloud plan is complete and there is no plans to move any new services to the cloud
- Update from the groups

    - Security: Alex mentioned two new security engineers at NCSA. One reliving Chris Clauson and Ryan Walker is auditing XES in AWS; Derek mentioned the recent vulnerabilities including the sudo exploit. CentOS 7 and 8 patch delivered in 1 day. This includes Open OnDemand. Alex has a concern about CentOS 6. Mostly think it is on infrastructure systems that are not user facing.
    - DTS: Dave mentioned PerfSonar are almost all 10G and Gary asked what OS they were running in case the vulnerability
    - XOC: Carman mentioned all is doing well with all but one person working from home. Continuing to work on ticket buckets and new process for ticket handling.
    - SysOps: Focus on the sudo vulnerability. Migrating CentOS 6 to 7. Patched SSO hub for sudoedit vulnerability. Atlassian no longer sells the server version of JIRA and Confluence. For the future it will be cloud based.   Gary mentioned CentOS 8 and it will be an upstream version of RHEL.

Discussion items

Time	Item	Who	Notes
2 min	New risks for transition based on recent solicitations	Scott	Scott mentioned at the last SMT call John mentioned about the NSF solicitation and there are risks since CEE and ECSS are not in the new solicitation and there will be risks associated with that. - John asked that all think about this and bring up any issues.
10 min	IPR14 due	Scott	Scott made the google doc and sent a link around - Quarterly risk review All have already done the risk review - Quarterly highlights and metrics data Update your info in the google docs - Quarterly publications submissions Communicate to all funded staff to add any publications in the portal. Use common sense, says Scott
4 min	Liferay update (if there is one)	Greg	Greg emailed Kelly and copied Maytal last week. - Maytal replied and encourage to communicate on what is going on. - If after a month no further effort on this Greg will continue the discussion. - Circle back on this in March, but before the quarterly.

1 min	Hybrid Cloud plan	Victor	Victor mentioned at the SMT that the Hybrid Cloud plan is complete and there is no plans to move any new services to the cloud
10 min	Mgr. Coordination	NA	- Security: Alex mentioned two new security engineers at NCSA. One reliving Chris Clauson and Ryan Walker is auditing XES in AWS; Derek mentioned the recent vulnerabilities including the sudo exploit. CentOS 7 and 8 patch delivered in 1 day. This includes Open OnDemand. Alex has a concern about CentOS 6. Mostly think it is on infrastructure systems that are not user facing. - DTS: Dave mentioned PerfSonar are almost all 10G and Gary asked what OS they were running in case the vulnerability - XOC: Carman mentioned all is doing well with all but one person working from home. Continuing to work on ticket buckets and new process for ticket handling. - SysOps: Focus on the sudo vulnerability. Migrating CentOS 6 to 7. Patched SSO hub for sudoedit vulnerability. Atlassian no longer sells the server version of JIRA and Confluence. For the future it will be cloud based. Gary mentioned CentOS 8 and it will be an upstream version of RHEL.
